SINCE 1964

INNOVATION

TriVac™ 700

OFFERS YOU TWICE MORE!

THE ONLY PRESSURE CLEANER THAT CLEANS THE BOTTOM AND SURFACE OF YOUR POOL

EASY: press just one button to choose “**bottom**” or “**surface**” mode and let the cleaner take care of the rest.

EFFICIENT: it has **optimum** pool cover. Its ultra-powerful Aqua-Drive propulsion system and sweep hose combine **speed** and **access to the most inaccessible places** (corners, stairs, etc.).

RESISTANT: its cover is fitted with **passive wheels** that absorb impacts against walls, preventing obstacles from stopping the cleaner in its path. This ingenious system protects the cleaner and the pool coating.

SMOOTH: its “**reverse**” function lets it turn round, thus allowing it to **move smoothly, without getting stuck**.

PRODUCTIVE: its (patented) **high-capacity** cleaning bag (5.6 litres) prevents the cleaner from slowing down when the bag is full.

GOOD
TO KNOW

Some light debris do not sink to the bottom of the water (dead leaves, insects, etc.).

That is why TriVac™ 700 is fitted with a “surface skimming” mode, in addition to a conventional bottom cleaning mode.

A real innovation: no other cleaner on the market has this feature!

Pressure cleaners

PRESSURE CLEANING

The TriVac™ 700 pressure cleaning system uses water pressure (high-pressure water jets) to move the cleaner and capture debris.

LARGE SUCTION CAPACITY
(and wide suction inlet)

MINIMUM RISK OF MALFUNCTION
No underwater electrical components

SUITABLE FOR ALL TYPES OF BOOSTER PUMP
However, the Hayward Booster pump optimises operation

al “floor cleaning” mode.

TriVac™ 700

> Skimming top and bottom modes
